

Product Announcement MPDB Series – Power Distribution Blocks

The Next Generation Open-Style Power Distribution Blocks (PDBs) are Coming

In May of this year Mersen will launch its next generation open-style power distribution blocks (MPDB series). The MPDB series will be an upgrade to the existing series by:

1. The new MPDB series will be UL Listed (as opposed to UL Recognized)

VS

UL Listing means the product is suitable for all applications without question (there are no conditions of acceptability). Many other products on the market are UL Recognized. UL Recognized components must be evaluated and approved by UL authority in the end use application. The MPDB UL Listing approval saves you and your customers time and money when selecting and installing PDB's. It's just plain easier.

2. The new MPDB series will showcase a new optional hinged safety cover

Safety covers are becoming more popular as the trend for increased electrical safety and reduction of shock hazards becomes more and more common. The optional MPDB safety cover easily snaps right into the PDB. There are no tools required making this a huge advantage over other products that require screws to mount covers.

Product Transition

The existing (old-generation) Mersen product will be phased-out and become obsolete. MPDB products will become available in May 2013 and Mersen will carry inventory of old-generation products through approximately September 2013.

Literature and tools are available now on the Mersen website:

<http://ep-us.mersen.com/catalog/power-distribution-blocks/mpdb-series-open-style-power-distribution-blocks/mpdb-series-open-style-power-distribution-blocks/>

Tools include Data Sheets, Outline Drawings, 3D models, Cross Reference Information, Dimensional Comparisons, Torque and Spec Information, UL Information and SCCR Tables.
