CURRENT COLLECTOR DEVICES (CCD)

CCD FOR STANDARD BOGIE

Current collector devices are used by Metro to collect the energy from the third rail to energize the Electrical Multiple Unit installed in the trailers.

Since 40 years, Mersen offer the largest range of Current Collector Devices of the market with almost 200 applications running every day all over the world.

The comprehensive range of CCD for Metro is designed for all kind of configurations:
- Regular steel wheel Metro
- Pneumatic wheel Metro,
- Monorail and
- Driverless metro applications

They can operate under 750VDC and 1.500VDC.

In this catalog, all technologies can be customized to your technical environments and available space on your bogie.

The sliding shoes can be retracted manually or using a pneumatic system also the CCD can be fixed on a beam and integrate a DC fuse protection and more functionalities.

All those technologies are proven and have shown their reliability every day since 40 years.

Some references for CCD for standard bogies:
Algiers metro (DZ), Bangkok metro (TH),...

FUNCTIONS

Pressure controller system (smart and connected function) (patented)
Mersen innovate in offering the possibility to equip the CCD’s with a sensor to measure the contact force of the CCD against the third rail all along the track with possibility to record this measurement. Too much pressure force and the mileage of the shoe will be shorten, too less and there will be a risk of losing the contact and generate arcing.

Temperature measurement (smart and connected function)
In case of a broken arm, the motor car and the trailers will run under failed mode (3 CCD collecting energy instead of 4). Mersen have developed a system which measure live the temperature of the CCD and bring this information to the TMS.

Retraction position indication
To inform the driver of the retracted position of the CCD, Mersen can integrate a micro-switch to relay the information of the position. This microswitch is compatible with all traction battery voltage supply (12, 24, 48 and 110VDC).

Shoe material
Mersen can propose different Shoe materials - Copper; Graphite; Cast iron; Steel; Cupro Alu adapted to your third rail. Once they are worn, it is very easy to change them for new ones supplied by Mersen.
FUNCTIONS

Weak link
To secure your CCD in case of shock, your CCD can be equipped with a weak link.
When the CCD hits an obstacle, the arm will break at the weak link section and leave in safe condition the CCD device.

Broken arm detection device
In case of a broken arm, the motor car and the trailers will run under failed mode (3 CCD instead of 4).
Mersen have innovated by proposing a combination of mechanical and electrical systems which detect instantaneously a broken arm and will inform the driver.

Adjusting rack
The CCD are equipped with an adjusting rack in order to adjust the shoe in vertical position in relation to the wheel overhauling and reprofiling wheel.
This adjusting rack can allow 40mm adjustment (pitch = 4mm)

On a beam
The CCD can be installed on a beam to adjust the position of the CCD from the bogie vs the position of the 3rd rail

Work shop plug
The CCD can be equipped with a work shop plug in case you need to power the train when the third rail is not available (in the work shop).

with Integrated Fusebox

Painting of Steel covers
Mersen can paint the covers or mass taint the isolated plastic frame of your CCD to the color specified by you, for purely cosmetic reasons.

Spare part kits
Mersen will supply you all Spare parts kits to increase the life time and guarantee a reliable service of your current collector devices.
- cables,
- fuses,
- replacement shoes and arms,
- hardware,
- and all necessary components

Training and technical support
The Mersen team can help you in training your maintenance team for your new installations all around the world.

Tooling
Beside the spare parts, Mersen can supply the necessary tooling to set perfectly your CCD to the technical requirements of your grid and optimize their use.
High, Low and nominal position can be set, also, the tool include a pressure measurement system to check the pressure of the CCD on the 3rd rail. this tool is mandatory to succeed in the great overhaul to guarantee a reliable service and longer life time of your CCD fleet.

LCC; RAMS; Type tests
All around the world, Mersen technical team can help you for technical support and can offer you customized training sessions for your Maintenance team.
